News Release 17-094

## NSF funds 30 faculty research fellowships through new EPSCoR initiative

Awards focus on developing the next generation of US researchers

Georgina Gibson will research dissolved organic matter at the interface of Arctic land and ocean.

New awards from the National Science Foundation's (NSF) [Established Program to Stimulate Competitive Research \(EPSCoR\)](https://www.nsf.gov/od/oia/programs/epscor/) <<https://www.nsf.gov/od/oia/programs/epscor/>> will provide 30 non-tenured researchers with fellowships, partnering them with premier research centers and enhancing their ability to work at the frontiers of science and engineering.

The NSF EPSCoR Research Infrastructure Improvement (RII) Track-4 fellowship awards total roughly \$5.6 million and are distributed to researchers across 20 states. Awardees will make extended collaborative visits to laboratories and scientific centers, establish partnerships with researchers with complementary expertise, learn new techniques, have access to sophisticated equipment, and shift their research focus in new directions.

Unlike other types of NSF EPSCoR awards, which focus on supporting research centers and partnerships among institutions, RII Track-4 focuses on giving individual researchers the foundation for collaborations that span their entire careers. RII Track-4 supports EPSCoR's mission of increasing scientific progress nationwide, as fellows enhance the research capacity of their local institutions and jurisdictions.

"NSF EPSCoR takes a comprehensive approach to building U.S. research capabilities," said NSF acting EPSCoR head Uma Venkateswaran. "These awards provide non-tenured researchers with tremendous opportunities and result in EPSCoR institutions gaining faculty members and investigators with cutting-edge research experience, who can help build the vibrant science and engineering laboratories and programs of the future."

The program is open to non-tenured investigators, or those with a close equivalent appointment, from EPSCoR jurisdictions. Currently, 24 states, the Commonwealth of Puerto Rico, the U.S. Virgin Islands and Guam are eligible to compete for EPSCoR funding. Through EPSCoR, NSF establishes regional partnerships with government, higher education and industry that create lasting improvements in a state's or territory's research infrastructure and research and development capacity.

The new RII Track-4 projects, their principal investigators and their home institutions are listed below.

*The National Science Foundation (NSF) is an independent federal agency that supports fundamental research and education across all fields of science and engineering. In fiscal year (FY) 2018, its budget is \$7.8 billion. NSF funds reach all 50 states through grants to nearly 2,000 colleges, universities and other institutions. Each year, NSF receives more than 50,000 competitive proposals for funding and makes about 12,000 new funding awards.*
