研究报告

DDS含量对有机硅/SiO₂杂化涂层性能的影响

林继月, 刘光明, 陈刚

南昌航空大学材料科学与工程学院 南昌 330063

摘要: 采用溶胶-凝胶法, 以正硅酸乙酯(TEOS)为无机相前驱体, 甲基三乙氧基硅烷(MTES)和二苯基二甲氧基硅烷(DDS)为有机相前驱体, 盐酸和水为催化剂, 通过水解-缩聚反应制备了不同DDS含量的有机硅/SiO₂有机-无机杂化溶胶。在100℃下经12 h烘干得到有机硅/SiO₂杂化涂层。涂层性能测试表明: 随DDS含量增加, 硬度、附着力、耐蚀性(未加DDS耐蚀性较差)有所下降; 柔韧性均为1级。低温下涂层耐热性较好。溶胶中n(TEOS):n(MTES):n(DDS)为6:9:2时涂层综合性能最佳。

关键词: 溶胶-凝胶 有机硅/SiO₂杂化涂层 盐雾试验 电化学阻抗

INFLUENCE OF DDS CONTENT ON THE PROPERTIES OF ORGANOSILICONE/SiO₂ HYBRID COATINGS

LIN Jiyue, LIU Guangming, CHEN Gang

School of Materials Science and Engineering, Nanchang Hangkong University, Nanchang 330063

Abstract: With tetraethyl orthosilicate (TEOS) as inorganic precursor, methyl triethoxysilane (MTES) and diphenyl dimethoxy silane (DDS) as organic precursor, hydrochloric acid and water as catalysts, organosilicone/SiO₂ organic-inorganic hybrid sols with different content of DDS have been prepared through hydrolysis-polycondensation reaction. Then a hybrid coating was obtained by drying at 100℃ for 12 hours. It showed that the hardness, adhesion and corrosion-resistance performances decreased with the increasing content of DDS, the corrosion-resistance property was poor without adding any DDS. The flexibilities were the grade one. The heat-resistance of the coating was good under low temperature. The comprehensive performances of the coating were optimal when the molar ratio of TEOS:MTES:DDS was 6:9:2 in the sol.

Keywords: sol-gel organosilicone/SiO₂ hybrid coating salt spray test EIS
