

Techniques and Instruments Used in Construction Project Management Costs Dimensioning

Author(s): Cătălin Onuțu

Tomme: LI (LV) | **Fascicle:** 1-2 | 2005

Pages: 87-92

Abstract text:

The paper aims to establish a series of methods regarding the dimensioning of the main economic parameters specific to the accomplishment of a building design, parameters generally linked to the total cost of the project. The total realization cost of a construction project represents the money expression of all "efforts" (labor force, material resources, equipment and technological units, informational resources, services, taxes, technical-administrative actions, etc.) necessary for the realization of the project in all its constitutive stages.
