摘要: 与惯性测量相比,用捷联安装在弹体上的磁阻式磁强计获取弹丸滚转姿态在带宽、体积、抗过载能力等方面都较有优势;不足的是,组成磁阻桥路的坡莫合金带温漂极大,致使传感器温度稳定性差,必须进行动态补偿,文中提出一种硬件补偿方法,仿真和实验均证实了该方法的可行性。

Abstract: Magnetometers are light-weighted, rigid, and reliable detect or with high overload tolerance comparing with inertial sensors. A significant drawback in magnetometer application is the temperature drifts. A dynamic hardware correction method is derived in this paper. The simulation and experiments results are carried out. It is proved that the low-cost hardware correction circuit is effective and accurate.
