摘要: 为了确定采用激光半主动制导的末段脉冲修正弹的攻击区域,建立了导引头探测区模型,建立了六自由度有控弹道方程组,并提出了攻击区建模和仿真的方法。利用上述模型对不同条件下的攻击区进行了仿真计算与分析,结果表明增大导引头视场角、脉冲修正能力、启控点高度和发射条件都将影响攻击区的范围。

Abstract: In order to determine the attack area of semi-active laser guided projectile with impulse thruster for terminal correction, the model of acquisition area for the seeker is established. Based on the analysis of impulse forces and impulse moments, the 6-DOF equations for trajectory under control are deduced, and an approach for constructing the model of attack area and its simulation method are proposed. With the models, attack area simulations under different control conditions are carried out. The results indicate that the range of attack area is affected by seeker's parameters, correction ability of impulse thrusters, and altitude of control active, firing conditions and so on.
