摘要: 未来战场上的武器和军用技术装备以及地面设施目标将更多地以集群目标形式出现, 针对集群目标的复杂毁伤结构, 运用统计模拟法, 研究集群目标毁伤效果的评估问题。以目标工作能力损伤情况作为目标毁伤评估的评判依据, 建立了集群目标杀伤概率统计估值函数, 并进行了实例计算。该方法可以根据火力或其它杀伤方式的评估结果, 确定目标在战役中的杀伤统计估值, 并将评估结果用于随后的战斗活动计划。

Abstract: In the future battlefield, more and more armaments and military equipment and the ground targets will appear in the form of group objects. Aiming at complex damage structure of group objects, the efficiency assessment of defeating group objects was studied by using statistical simulation method. The change of operational efficiency of objects was regarded as evaluation criteria of damage effect and a statistical estimation function of probability of defeating group objects was set. This method could define the statistic evaluation of defeating objects in campaign according to evaluation results of firepower or other damage, and the assessment result could be used to plan the following battle activity.
