## Fire Safety Journal

An international journal devoted to research on **Fire Safety Science and Engineering**

Official Journal of the [International Association for Fire Safety Science](#)

*Fire Safety Journal* is the leading publication dealing with all aspects of **fire safety engineering**. Its scope is purposefully wide, as it is deemed important to encourage papers from all sources within this multidisciplinary subject, thus providing a forum for its further development as a distinct engineering discipline. This is an essential step towards gaining a status equal to that enjoyed by the other engineering disciplines.

It is impossible to give a comprehensive list of topics which are considered acceptable and the following list is intended for guidance only:

- Fire **chemistry** and **physics**
- **Fire dynamics** (including gas explosions)
- Active **fire protection systems**, including

[Guide for Authors](#)[Submit Your Paper](#)[Track Your Paper](#)[Order Journal](#)[View Articles](#)

detection and suppression

- Passive fire **protection methods**
- People/fire **interactions** (physical, physiological and psychological)
- **Fire safety management**
- Assessment and quantification of **fire risk** (including acceptability of risk)
- Fire **investigation**
- Fire **safety design** (including consumer items, industrial plant, transportation, buildings)
- Fire safety **legislation**
- Fire safety **education**.

Original contributions relating to any of the above topics are invited, particularly if they incorporate a quantitative approach to the subject in question.
