Energy Institute Asks For Opinions on Code on LPG Storage
19/08/2013
The Energy Institute is considering options for publishing a new edition of their model code of safe practice on LPG storage. They invite users of LPG storage to answer an online survey on the previous edition of the guidance, published in 1987.

EPSC - European Process Safety Centre

EPSC - the European Process Safety Centre - is an international industry-funded organisation which provides an independent technical focus for process safety in Europe.

EPSC's activities are sponsored by chemical manufacturing companies and related businesses with a keen interest in chemical process safety.

EPSC's members secure the following benefits for themselves and the wider European chemical industry:

- sharing and dissemination of information and experience on safety technology and accident prevention
- technical input to legislators and standard makers to ensure more realistic legislation
- improved co-ordination of safety standards across Europe
- identification of emerging safety-related issues or gaps in knowledge where guidelines or reports could be produced or commissioned.
- improved co-ordination of safety R&D and handling of complex technical research programmes
- stimulation of R&D where there are gaps in knowledge
- transfer of knowledge from elsewhere to Europe and between European countries
- access to information from a single source
