摘要: 湿地对于地球生态系统的修复及完善具有重要作用。作为优质大豆生产基地, 黑龙江三江平原地区湿地生态系统随着开发而不断遭到破坏, 生态环境的恶化间接影响了农业生产的可持续发展。如何利用市场机制诱导资源合理分配, 不断保护日益减少的湿地资源, 保持大豆生产的健康发展日益紧迫。运用层次分析法(AHP), 分析了三江平原大豆生产的湿地影响因素, 研究发现湿地权属、生态效益补偿、投融资制度、税费政策及农业保险是影响湿地退化的主要因素, 进而也是三江地区大豆生产的主要影响因子。

Abstract: Wetland is very important for repairing and perfecting the earth's ecological system. As the high-quality soybean production base, the wetland ecological system of Sanjiang plain was damaged due to excessive exploitation, and hence hampered the sustainable development of agriculture. How to use the market mechanism to induce a rational allocation of resources, protect the wetland resources and promote the healthy development of soybean production becomes increasingly urgent. This paper adopted analytic hierarchy process(AHP) to analysis the factors that restrained the soybean production in Sanjiang plain area. Results showed that wetland ownership, ecological compensation, investment financing system, tax policy, and agricultural insurance were the main factors.
