摘要 以栽培草莓 (*Fragaria × ananassa* Duch.) ‘久香’叶片为试材, 采用同源克隆和RT-PCR方法, 克隆FaNBS20全长cDNA序列, 并利用实时荧光定量PCR技术检测外源SA处理协同草莓炭疽病病原菌侵染对FaNBS20表达的影响。结果表明, FaNBS20的开放阅读框为3 573 bp, 编码1 190个氨基酸, 预测的蛋白质分子量为134.5861 kD, 含有1个TIR结构域、1个NB-ARC结构域和1个亮氨酸的富集区, 与森林草莓 (*Fragaria vesca* subsp. *vesca*) 抗烟草花叶病毒蛋白 (XP_004292718) 同源性高达99%。

接种草莓炭疽病菌对草莓抗炭疽病品种‘甜查理’FaNBS20的表达影响显著, 易感病品种‘久香’FaNBS20的表达则一直处于较低水平, 表明该基因可能与对炭疽病的抗性相关。两个草莓品种在SA处理后对草莓炭疽病的抗性均明显增强, 且持续期可以达到10 d以上。在SA和草莓炭疽菌协同诱导下, FaNBS20基因的表达量在抗性品种‘甜查理’和易感品种‘久香’中分别达到接种前的38倍和7.2倍。以上结果表明, 水杨酸能提高草莓对炭疽菌侵染的抗性, 表达水平和炭疽病抗性水平相关的FaNBS20基因可能是水杨酸参与的对炭疽病抗性响应途径中一个重要的成员。

Abstract: A full-length cDNA of FaNBS20 was isolated by homologous cloning and RT-PCR from *Fragaria × ananassa* Duch. ‘Jiuxiang’. Sequence analysis indicated that FaNBS20 holds a 3 573 bp open reading frame encoding 1 190 amino acids with an estimated molecular mass of 134.5861 kD. Bioinformatics analysis revealed that FaNBS20 contains typical domains of TIR, NB-ARC, and LRR type. FaNBS20 shares a 99% sequence similarity with the TMV resistance protein (GenBank accession No. NC_020492) from *Fragaria vesca* subsp. *vesca*. Expression of FaNBS20 was obviously changed by the inoculation of *Colletotrichum gloeosporioides*, a causal agent of strawberry anthracnose. Opposite changes were observed in two cultivars with different susceptibility to anthracnose. In both the resistant variety ‘Sweet Charlie’ and the susceptible ‘Jiuxiang’, resistance to *C. gloeosporioides* infection was clearly improved by spraying salicylic acid and this enhancement lasted for more than 10 d. Following the combined treatment of SA and *C. gloeosporioides*, expression of FaNBS20 showed a 38-fold and 7.2-fold increase in ‘Sweet Charlie’ and ‘Jiuxiang’, respectively. These results indicate that the expression of FaNBS20 may be positively correlated to strawberry resistance, and external SA can increase strawberry resistance to anthracnose, probably, through a signaling network with FaNBS20 as an important component.

Keywords: *Fragaria × ananassa*; salicylic acid; *Colletotrichum gloeosporioides*; cloning; expression analysis
