## Root systems of forest tree species and their soil-conservation functions on the Krušné hory Mts. slopes disturbed by mining

P. Čermák, F. Féř

<https://doi.org/10.17221/2167-JFS>

Citation: Čermák P., Féř F. (2007): Root systems of forest tree species and their soil-conservation functions on the Krušné hory Mts. slopes disturbed by mining. *J. For. Sci.*, 53: 561-566.

[download PDF](#)

The paper describes the root system architecture of the forest tree species *Fagus sylvatica* L., *Quercus robur* L., *Pinus sylvestris* L., *Carpinus betulus* L., *Acer platanoides* L., and *Alnus glutinosa* (L.) Gaertn. at the age of 80–220 years growing on the slopes of the Krušné hory Mts. at the altitude of 330 to 480 m above sea level. These species were influenced by open-pit mining of brown coal as well as by power engineering. The investigation also involves the determination of soil properties of Ranker Cambisols.

**Keywords:**

root system; architecture; soil properties; Ranker Cambisols; mining; landslides
