**摘要** 从云南德钦县的霞若、托顶两个乡镇共采集了8群东方蜜蜂的样蜂, 每群测定分析15只工蜂, 每只工蜂总共有38个测定的形态特征。测定的性状特征数据进行因素分析、主成分分析和聚类分析, 并与云南省内其它县东方蜜蜂的相关数据进行比较。结果表明, 德钦东方蜜蜂个体较大, 身上的绒毛较长, 与云南省内其它东方蜜蜂分开, 独自形成一个类群。

## Morphology and Taxonomy of *Apis cerana* in Deqin

LUO Ling-juan, TAN Ken

(Eastern Bee Research Institute, Yunnan Agricultural University, Kunming 650201, China)

### Abstract

The morphological characters and taxonomy of *Apis Cerana* in Deqin county of Yunnan province was studied using morphological methods. Eight samples of *A.cerana* were collected from Deqin. Thirty-eight standard morphological characters were measured. The data were analyzed by factor analysis, principal component analysis and cluster analysis. The results showed that *A.cerana* had a high degree of variation in size with various geographic features, longer hair and formed an individual branch, compared with other *A.cerana* in Yunnan.
