摘要 目的筛选并鉴定小鼠大脑皮层发育过程中皮层层次特异表达的基因是否存在天然反义转录物(NAT)。**方法**对63个小鼠大脑皮层层次特异表达的基因进行生物信息学预测,筛选出31个可能存在NAT的基因,从小鼠脑组织及神经系统来源的细胞系提取总RNA,采用RT-PCR方法对筛选阳性基因进行鉴定并克隆到pGEM-T载体中进行测序。**结果**31个经生物信息学预测的基因中,8个为NAT阳性。**结论**小鼠大脑皮层发育过程中皮层层次特异表达的基因存在NAT,NAT可能通过调控编码基因影响小鼠皮层发育。

Abstract: Objective To screen and identify the possible existence of natural antisense transcript (NAT) within the mouse neocortex. Methods Sixty-three cerebral cortex layer-specific genes were screened by bioinformatics prediction in mice, among which 31 mice with potential NATs were screened. NAT was identified using reverse transcription polymerase chain reaction (RT-PCR) and then cloned in pGEM-T Vector System for sequencing. Results Among 31 genes predicted using bioinformatics, 8 were proved to be NAT positive by RT-PCR. Conclusions NATs exist in the mouse neocortex tissue during the development of cerebral cortex. NATs may influence mouse cortical development by regulating the related coding genes.

Keywords: natural antisense transcript mouse cerebral cortex screening identification
