摘要 目的: 研究呼吸道合胞病毒(RSV)感染与细胞凋亡的关系及对凋亡相关基因FasL、Fas、bcl-2和bax表达的影响。方法: 采用A549细胞, 在RSV感染后不同时点收集细胞, 流式细胞仪和透射电镜检测细胞凋亡, 免疫组织化学法检测凋亡相关基因FasL、Fas、Bcl-2和Bax表达情况。结果: 流式细胞仪检测结果RSV感染后72 h (6.61%)、120 h (10.94%) 的细胞凋亡指数明显高于对照组 (4.32%、5.31%) ; 免疫组化法检测结果对照组FasL、Bax基因呈现无表达或局部弱表达; 随着RSV感染时间的延长, bax、Fas、FasL基因的表达均高于对照细胞, bcl-2基因呈现弱表达或无表达。结论: RSV在感染后期能诱导宿主细胞发生凋亡, 促凋亡基因FasL、Fas、Bax和抗凋亡基因Bcl-2表达水平的差异是RSV诱导凋亡的机制之一。

Abstract

AIM: To study the relationship between respiratory syncytial virus (RSV) infection and apoptosis, between RSV infection and expressions of FasL, Fas, Bcl-2 and Bax. METHODS: Apoptotic cells were examined by flow cytometry and transmission electron microscope. Immunohistochemical analysis was used to detect the expressions of apoptosis-associated gene FasL, Fas, Bcl-2 and Bax in A549 cells during RSV infection. RESULTS: Apoptotic index increased at 72 h and 120 h postinfection. Apoptotic cells were detected by transmission electron microscope. High-expressions of FasL, Fas and Bax genes and low-expression of Bcl-2 gene were detected by immunohistochemical staining. CONCLUSION: Apoptosis in A549 cells was induced by RSV infection. This apoptosis may be induced by up-regulating the expression of FasL, Fas, Bax genes and down-regulating the expression of Bcl-2 gene.
