冬虫夏草的药理作用

张士善;张伯石

河北医学院药理教研组,保定

摘要:

本文探讨了中药冬虫夏草的一般药理作用,证明冬虫夏草浸剂有显著扩张离体动物支气管的作用,这点和中医文献所載的效用是一致的,此外对腸管、子宫及心臟均有抑制作用,对血管直接作用不显著,对血压仅靜脉注射时表现降压,腹腔及肌肉内注射均不表现任何作用,对小白鼠並有鎮靜及催眠作用,其毒性極低。

PHARMACOLOGICAL ACTIONS OF *CORDYCEPS SINENSIS* ZACC.

CHANG SHIH-SHAN CHANG PAI-SHIH

Abstract:

Some pharmacological actions of the Chinese drug Tung-Chung-Hsia-Tsao (*C. sinensis*, Zacc.) are reported. The infusion of *C. sinensis* dilates the isolated guinea pig's bronchi conspicuously. This corresponds with old Chinese medical literatures. In addition to this, the infusion inhibits the isolated small intestines, uteri, and heart of the rabbit, guinea pig and/or the frog. No sign of direct action on the blood vessels of the frog leg was shown. In anaesthetised dogs, intravenous injection of the infusion lowered the blood pressure, and there was not any effect on intraperitoneal or intramuscular injection with the dosage of 2 ml/kg of 1:1 infusion. Its toxicity in mice was very low.
