摘要:

目的: 探讨乳腺癌患者体像问卷中文版(the body image after breast cancer questionnaire-Chinese version, BIBCQ-C)在我国女性乳腺癌患者中的适用性。方法: 545名女性乳腺癌患者完成BIBCQ-C问卷、医院焦虑抑郁问卷, 间隔4周后随机选取31名受试者进行BIBCQ-C问卷重测。结果: BIBCQ-C总量表的Cronbach's α 系数为0.90, 6个因子的 α 系数为0.62~0.87; 总量表的条目间平均相关系数为0.16, 6个分量表的条目间平均相关系数为0.21~0.57; 总量表及6个因子的重测信度均在0.6以上; 验证性因素的分析结果支持该量表的6因子结构; BIBCQ-C总量表与抑郁和焦虑症状得分呈显著相关($r=0.20, 0.21, P<0.01$)。结论: 乳腺癌患者体像问卷中文版具有良好的信度和效度, 能够有效评估乳腺癌患者的体像状况。

Abstract:

Objective: To examine the psychometric features of the body image after breast cancer questionnaire-Chinese version (BIBCQ-C) in Chinese women with breast cancer. Methods: A total of 545 women with breast cancer received a demographics investigation: BIBCQ-C and hospital anxiety and depression scale (HAD). Four weeks later, 31 patients were selected randomly to finish BIBCQ-C again. Results: The Cronbach's α coefficient for the total scale was 0.90, and that for the 6 factors ranged from 0.62 to 0.87. The mean inter-item correlation coefficient of the total scale was 0.16, and the mean inter-item correlation coefficient of the subscales ranged from 0.21 to 0.57, and the test-retest reliability of the total scale and 6 factors was over 0.60. The confirmatory factor analyses supported the 6-factor model, and BIBCQ-C were significantly correlated with the symptom scales of anxiety and depression ($r=0.20, 0.21, P<0.01$). Conclusion: BIBCQ-C is reliable and valid, which can effectively assess body image of Chinese women with breast cancer.
