摘要:

目的 制备抗小鼠巨噬细胞移动抑制因子(mMIF)单克隆抗体(McAb)对其进行放射性碘标记,为进一步研究MIF在炎症、肿瘤核素显像中的意义奠定基础。方法 异丙基硫代- $\beta$ -D-半乳糖(IPTG)诱导pEQ30-mMIF/M15工程菌表达重组mMIF蛋白;采用杂交瘤技术制备单克隆抗体,蛋白质印迹技术(Western blotting)和酶联免疫吸附试验(ELISA)进行特异性鉴定,巨噬细胞移动抑制试验(MMI)鉴定生物学活性。采用二氯二苯基甘脲(Iodogen)法,用Na125I标记抗mMIF单克隆抗体。结果 成功建立3株稳定高效价分泌抗mMIF单克隆抗体的杂交瘤细胞株,分别命名为5G2D7,5G2C7,5G2E3。经Western blotting、ELISA和MMI鉴定证明抗mMIF单克隆抗体具有良好的抗原特异性和生物学活性;125I-抗mMIF单克隆抗体的标记率为90.40%,放射化学纯度98.36%,放射性比活度为21.48MBq/ $\mu$ g。结论 成功制备抗mMIF单克隆抗体和放射性碘标记抗mMIF单克隆抗体,为深入研究MIF相关性疾病和利用MIF进行临床肿瘤及炎症放射免疫显像提供了实验基础。

Abstract:

Objectives To explore the potential values of macrophage migration inhibitory factor(MIF) in inflammation and tumor radioimaging. Methods Recombinant mMIF was obtained through IPTG-induced pEQ30-mMIF/M15 E.coli, and anti-mMIF McAb was made with hybridoma technology whose specificity and biological activities were identified with Western blotting, ELISA and MMI. Anti-mMIF antibodies were radioiodinated by Na125I with Iodogen method. Results Three stable cell lines were obtained, named as 5G2D7, 5G2C7 and 5G2E3 respectively with high specificity and biological activity to MIF. The labeling rate of 125I-anti mMIF McAb was 90.40%, the radiochemical purity was 98.36%, and specific radioactivity was 21.48MBq/ $\mu$ g. Conclusion Anti-mMIF McAb was obtained and radioiodinated successfully, which may supply a new tool for further research of MIF, especially for clinical oncology and inflammation radioimaging.

Keywords: Macrophage migration inhibitory factors; Monoclonal antibody; Radioisotope; Mice; Inbred BALB/c
