摘要: 目的 研究三氧化二砷 (arsenic trioxide, As₂O₃) 对激素非依赖性前列腺癌DU145细胞的生长抑制作用及对RASSF1A基因去甲基化和蛋白表达的影响。方法 应用MTT法检测不同浓度(0.5、1.0、2.0、4.0、6.0、12.0、20.0 μmol/L)的As₂O₃不同作用时间 (24、48、72 h) 对DU145细胞的生长抑制作用; 应用甲基化特异性PCR(MSP)和Western blot检测As₂O₃对DU145细胞RASSF1A基因甲基化状态及蛋白表达的影响。结果 As₂O₃可抑制DU145细胞的增殖, 在一定范围内随着药物浓度的增高, 抑制作用逐渐增强($F=838.089, P<0.05$) ; 同一浓度作用时间越长, 抑制率越高 ($F=8.849, P<0.05$) ; 且As₂O₃可使RASSF1A基因甲基化逆转, 蛋白重新表达。结论 As₂O₃可以逆转前列腺癌DU145细胞RASSF1A基因启动子CpG岛的异常甲基化, 诱导该抑癌基因的重新表达, 抑制前列腺癌DU145细胞的增殖。

Abstract: Objective To determine the inhibitory effects of arsenic trioxide (As₂O₃) on the proliferation in hormonal independent prostate cancer DU145 cells, and on demethylation and expression of Ras-assciation domain family 1A (RASSF1A). Methods MTT assay was used to test the growth of DU145 cells after the treatment of As₂O₃ at 0.5, 1.0, 2.0, 4.0, 6.0, 12.0 or 20.0 μmol/L for 24, 48 or 72 h. Methylation-specific PCR (MSP) and Western blot analysis were used to detect the methylation status and protein expression of RASSF1A gene in Du145 cells after treatment. Results As₂O₃ significantly inhibited the proliferation of DU145 cells in a dose- and time-dependent manner ($F=838.089, P<0.05, F=8.849, P<0.05$). As₂O₃ treatment reversed the methylation status of RASSF1A gene and made the protein re-expression. Conclusion As₂O₃ reverses abnormal methylation status of promoter CpG island of RASSF1A gene in DU145 prostate cancer cells, induces protein re-expression and inhibits the cells proliferation.
