中文摘要:本实验旨在观察粉防己碱(Tet)对脂多糖(LPS)诱导下RAW264.7细胞炎症模型的抗炎作用。采用LPS 1 μg/mL刺激生长良好的RAW264.7巨噬细胞建立细胞炎症模型。在不同浓度Tet(1×10^{-8} , 1×10^{-7} , 1×10^{-6} mol/L)作用下,用Western blotting检测各组细胞中环加氧酶-2(COX-2)和诱导性一氧化氮激酶(iNOS)的表达,用NO检测试剂盒检测细胞培养液中NO的含量,酶免疫分析法检测培养液中前列腺素E₂(PGE₂)含量。结果显示Tet剂量依赖性地抑制LPS诱导的RAW264.7细胞PGE₂、NO的表达,同时抑制其合成酶COX-2和iNOS的表达。表明Tet具有抑制LPS诱导的RAW264.7细胞炎症反应的作用,其抗炎机制可能通过抑制COX-2、iNOS的表达,从而抑制其下游炎性介质NO、PGE₂的表达有关。

Effects of tetrandrine on COX-2/PGE₂,iNOS/NO expression in LPS-stimulated RAW264.7 cells

Abstract:The effects of tetrandrine (Tet) on the expression of cyclooxygenase-2 (COX-2),prostaglandin E₂ (PGE₂),inducible isoforms of nitric oxide synthetase (iNOS) and nitric oxide (NO) in LPS-stimulated RAW264.7 cells were investigated.RAW 264.7 cells were pretreated with LPS 1 μg/mL to set up the cell inflammatory model;various concentrations (1×10^{-8} , 1×10^{-7} , 1×10^{-6} mol/L)of Tet were administered to explore its effect on the expression of COX-2/PGE₂,iNOS/NO in these LPS-stimulated cells.Western blotting was applied to detect the expression of intracellular COX-2 and iNOS;special NO kit was used to detect the level of NO, and enzyme immunoassay (EIA) kit to that of PGE₂.The results showed that Tet significantly decreased the expression of PGE₂ and NO as well as COX-2 and iNOS synthetase in LPS-stimulated RAW264.7 cells in a dose-dependent manner.So it suggests that Tet can inhibit the inflammation response in LPS-stimulated RAW264.7 cell,which might be mediated by down-regulating the expression of PGE₂ and NO through the inhibition of COX-2 and iNOS synthetase.
