摘要:

本文报道用三价磷试剂与保护的鸟嘌呤核苷反应,经碘氧化生成鸟嘌呤核苷-3',5'-环磷酸酯和磷酰胺,并对它们的生物活性做了初步研究, N^2 -二甲胺基甲烯基-2'-叔丁基二甲基硅基鸟嘌呤核苷-3',5'-环磷酸酯和磷酰胺对小鼠肝癌腹水细胞的DNA和RNA合成有一定的抑制作用。 N^2 -二甲胺基甲烯基鸟嘌呤核苷-3',5''-环磷酸丁酯的两个磷原子构型不同的异构体可激活腺苷酸环化酶,使大鼠成骨肉瘤细胞株ROS 17/2.8的cAMP水平增高。

关键词: 鸟嘌呤核苷-3',5'-环磷酸酯和磷酰胺 腺苷酸环化酶

SYNTHESIS AND BIOLOGICAL ACTIVITY OF DERIVATIVES OF GUANOSINE 3',5'-CYCLIC PHOSPHATE

HY Cai and LH Zhang

Abstract:

Methyl, n-butyl 2'-TBDMS-N~2-DMF-guanosine 3', 5'-cyclic phosphate and 2'-TBDMS-N~2-DMF-guanosine 3', 5'-cyclic diethyl-phosphoramidate were synthesized by reaction of protected guanosine with trivalent phosphorus reagents in the presence of tetrazole followed by oxidation. The reaction occurred stereospecifically. Protected guanosine 3', 5'-cyclic phosphotriesters and N, N'-diethylphosphoramidate were shown to have inhibitory activity on the synthesis of DNA and RNA in mouse liver tumor cell. Diastereoisomers of n-butyl N^2 -substituted guanosine 3', 5'-cyclic phosphate have been shown to activate adenylate cyclase *in vitro*.

Keywords: Adenylate cyclase Guanosine 3', 5'-cyclic phosphate and phosphoramidate
