L Wang; LH Yun and QK Zhang

**Abstract:**

Eight 2 $\alpha$ -(2',2'-disubstituted-2'-hydroxyethoxy) tropanes(2) were prepared by reactions of enantiomeric and racemic 2 $\alpha$ -tropanols with 1,1-disubstituted oxiranes. The optical purity of these diastereoisomers was analyzed by RP-HPLC. The results of preliminary screening indicated that the stereochemical variations of these isomers exhibited great influence on the binding affinity for rat brain M-receptor Compounds with 2' R configuration for the tertiary carbon showed greater activity.

Keywords: Optical isomers M-receptor antagonists RP-HPLC 2 $\alpha$ -tropane ethers
