摘要:

应用放射受体结合法研究了近30种四氢异喹啉类(TIQs)生物碱对大鼠脑内 α 肾上腺素受体的作用。其中I-CBN,I-THC和I-STP对 α_1 受体亲和力最高, K_i 值为 $\sim 2.0 \times 10^{-7}$ mol/L。其次是DHS,XLP和I-DCT, K_i 值分别为 4.7×10^{-7} , 6.5×10^{-7} 和 7.6×10^{-7} mol/L。DHS对 α_2 受体亲和力最高($K_i=1.25 \times 10^{-6}$ mol/L),I-REM次之。对 α 受体亚型亲和力选择比 $K_{\alpha_2}/K_{\alpha_1}$ 最高的是I-STP(357) 和XLP(154),它们对 α_2 受体几乎无亲和力($K_i > 10^{-4}$ mol/L)。提示I-STP和XLP对 α_1 受体有较高的选择性。I-SPD和I-THP对 α_1 和 α_2 受体亲和力相近,均为中等强度。THJ,DRC及I-TTD等6种TIQs对 α_1 和 α_2 受体均无亲和力($K_i > 10^{-4}$ mol/L)。

EFFECT OF TETRAHYDROISOQUINOLINE ALKALOIDS ON ALPHA ADRENOCEPTORS IN RAT BRAIN

BY Han and GQ Liu

Abstract:

About 30 tetrahydroisoquinolines have been investigated for their in vitro affinities to rat brain alpha adrenoceptors. I-Crebanine(1-CBN) and I-tetrahydrocoptisine (I-THC) were found to be the most potent inhibitors of [³H] WB 4101 binding to alpha-1 adrenoceptors ($K_i=1.9 \times 10^{-7}$ and 2.0×10^{-7} mol/L, respectively), I-Stephanine(I-STP), dehydrostephanine(DHS) and xylopine(XLP) were also shown to be effective on alpha-1 adrenoceptors ($K_i=2.8 \times 10^{-7}$, 4.7×10^{-7} and 6.5×10^{-7} mol/L, respectively). DHS appeared to be the most active in displacing [³H] clonidine binding to alpha-2 adrenoceptors ($K_i=1.25 \times 10^{-6}$ mol/L). I-tetrahydropalmatine(I-THP) and I-stepholidine (I-SPD) exhibited similar affinities to alpha-1 and alpha-2 adrenoceptors. Berbamine(BBA)interacted moderately with alpha-2 adrenoceptors ($K_i=6.16 \times 10^{-6}$ mol/L). I-STP and XLP have relatively high affinities to alpha-1 adrenoceptors (as above), but they did not show any affinity to alpha-2 adrenoceptors. Their alpha-1 and alpha-2 adrenoceptors binding selectivity ratios $K_{\alpha_2}/K_{\alpha_1}$ were 357 and 154 respectively. It is suggested that I-STP and XLP are more selective to alpha-1 adrenoceptors.

Keywords: I-Stephanine I-Crebanine I-Tetrahydrocoptisine Alpha adrenoceptors Tetrahydroisoquinoline alkaloids
