摘要:

用基质辅助红外激光解吸离子化/傅里叶变换离子回旋共振质谱法(IR-MALDI/FTICRMS)分析了促黄体素释放激素类似物、血管紧张肽原酶底物及血管紧张肽。分别以2,5-二羟基苯甲酸、丁二酸为基质,测定其分子量,测定值与理论计算值的相对误差小于 4×10^{-6} ,适当增加激光功率密度,获得了一系列特征碎片离子并进行了归属,从而确证了3种寡肽的一级结构。提示本研究为测定寡肽的分子量和一级结构提供了一个简便、快速、准确的方法。

DETERMINATION OF OLIGOPEPTIDE BY IR MATRIX ASSISTED LASER DESORPTION IONIZATION MASS SPECTROMETRY

Zhou Honghua and Sheng Longsheng

Abstract:

Luteinizing releasing hormone analog (LRH-A), renin substrate tetradecapeptide and angiotensin I were analyzed with infrared matrix assisted laser desorption ionization/Fourier transform ion cyclotron resonance mass spectrometry (IR-MALDI/FTICR MS). 2,5-Dihydroxybenzoic (DHB) and succinic acid (SA) were used as matrices. The m/z of oligopeptides were determined with an error less than 4×10^{-6} . A series of characteristic fragment ions of peptides were obtained by increasing the laser power density appropriately. Their elemental compositions and the first order structures were confirmed. A sensitive, rapid and accurate method was established for the determination of oligopeptide.

Keywords: Fourier transform/ion cyclotron resonance mass spectrometry Oligopeptide Luteinizing releasing hormone analog (LRH-A) Renin substrate tetradecapeptide Angiotensin I Matrix-assisted laser desorption ionization mass spectrometry
