中文摘要:从理论层面重点探讨“干细胞循环”与“活血化瘀”理论的内在相关性。通过“干细胞循环理论”,干细胞“动员”与“生新血”,干细胞“归巢”与“祛瘀血”,干细胞“分化”与“生新物、生新脉”,干细胞“修复、激活”与“化旧生新”,活血化瘀法“生新”与干细胞“分化方向”几个方面对中医“活血化瘀”理论和“干细胞循环”理论进行研究,结合前期试验和临床研究所感,发现并分析活血化瘀方药不仅能激活并促进内源性干细胞的大量增殖,也有调控干细胞分化方向的作用,必将推动干细胞技术的临床应用。明确活血化瘀方药调控干细胞分化的作用机制。

Study on Blood-promoting and Stasis-removing Theory—Based on Stem Cell Cycle Theory and Blood-promoting and Stasis-removing Theory

Abstract:The inherent relation between the stem cell cycle and the blood-promoting and stasis-removing theory is discussed in theory. The blood-promoting and stasis-removing theory and the stem cell cycle theory are studied from several aspects such as stem cell cycle theory, stem cell mobilization and fresh blood production, stem cell homing and blood stasis removing, stem cell differentiation and new thing production, stem cell repair, and stem cell activation. Based on the previous experiments and clinical research, the fact is found that prescriptions of promoting blood circulation for removing blood stasis can not only activate the proliferation of endogenous stem cells, but also regulate the stem cell differentiation, which can promote the clinical use of stem cell technology, and make clear the action mechanism of prescriptions of promoting blood circulation for removing blood stasis in regulating stem cell differentiation.
