基金项目:国家"重大新药创制"科技重大专项(2011ZX09201-201-07,2011ZX09401-404);广州市科技计划项目(2007Z1-E5035)

中文摘要:目的:建立栀子药材中环烯醚萜类和西红花酸类两大类主要成分的HPLC指纹图谱,为全面评价栀子药材质量和整体控制提供依据。方法:采用Inertsil ODS-SP(4.6mm×250mm,5μm)色谱柱,甲醇-0.1%甲酸水变波长梯度洗脱,流速1.0mL·min⁻¹,柱温25℃。采用相似度评价软件(2004药典版)对10批栀子商品药材指纹图谱进行相似度计算。结果:指纹图谱中共确立了20个共有峰,并通过与标准品比对,两个主峰分别鉴定为栀子苷和西红花苷-1,10批栀子药材的相似度在0.95~0.99。结论:该方法具有良好的精密度、重复性和稳定性,可较全面地反映栀子的化学成分,为有效控制该药材的内在质量提供了科学依据。

HPLC Fingerprint Analysis of Iridoids and Crocetin Derivatives in Gardenia Fructus

Abstract:Objective:To establish a HPLC fingerprint of iridoids and crocetin derivatives in Gardenia Fructus (GF) for the evaluation of the intrinsic quality. **Method:**Chromatographic separation was carried out by an Inertsil ODS-SP column (4.6 mm×250 mm,5 μm) and gradient elution was performed by mobile phase containing MeOH and 0.1% formic acid aqueous solution. The flow rate was 1.0 mL·min⁻¹, the column temperature was maintained at 25℃, and the separated compounds were detected at a variable wavelength. The similarity evaluation software was adopted to analyze the similarities of 10 batches of commercial GF. **Result:**A consistent HPLC fingerprint pattern containing 20 common peaks was obtained and two major components were identified as geniposide and crocin-1, and the results of similarities of ten batches were range from 0.95 to 0.99. **Conclusion:**The established fingerprint method which reflect more chemical composition information of GF had good precision, reproducibility, stability, and could provide as an effective tool for the quality control of GF.
