

This block contains a large amount of XML code, likely representing a configuration or schema definition for a software application. The code is highly nested and uses various XML tags (e.g., `<Content_Types>`, `<File>`, `<Extension>`) to define different file types and their properties. It includes sections for file extensions like `.xml`, `.xsl`, `.xsd`, and `.rels`, as well as detailed descriptions of file formats and their relationships.

This block contains a large amount of XML code, likely representing a configuration or schema definition for a software application. The code is highly nested and uses various XML namespaces and attributes to define complex data structures. It includes sections for 'Content_Types', 'rels', and 'shapexml'. The code is heavily annotated with comments and placeholder values like 'x' and 'y'.
