中文摘要:目的:优选消食导滞凝胶的水提工艺条件。方法:以栀子苷为指标,HPLC测定含量,Agilent XDB-C₁₈色谱柱(4.6 mm×150 mm, 5 μm),流动相乙腈-水(10:90),检测波长238 nm,流速1.0 mL·min⁻¹,选取加水倍数、提取时间、提取次数为考察因素,采用L₉(3⁴)正交试验优选消食导滞凝胶的提取工艺。结果:最佳水提取工艺为加6倍量水提取2次,每次1 h。结论:该优选工艺流程操作简单,生产成本低,适合于工业生产的需要。

Optimization of Extraction Technology for Xiaoshi Daozhi Gel

Abstract:Objective: To optimize water extraction technology of Xiaoshi Daozhi gel. Method: With the content of geniposide as index which was determined by HPLC, Agilent XDB-C₁₈ column (4.6 mm×250 mm, 5 μm), acetonitrile-water (10:90) as mobile phase with flow rate of 1.0 mL·min⁻¹, UV detection wavelength was 238 nm, orthogonal test was used to optimize extraction technology of Xiaoshi Daozhi gel with water volume, extraction times and extraction time as factors. Result: Optimal water extraction technology was as follows: extracted 2 times with 6 times the amount of water, 1 h per time. Conclusion: This optimized technology was simple with low cost, it was suitable for industrial production.
