中文摘要:有关雷公藤多苷(multi-glycoside of *Tripterygium wilfordii*,GTW)临床药效学的研究主要是针对增殖性肾小球肾炎、狼疮性肾炎、类风湿性关节炎、银屑病等免疫相关性疾病。其临床疗效主要表现在改善相应疾病的临床症状,减少蛋白尿和血尿,减轻关节痛和皮肤损害等。GTW及其活性成分雷公藤甲素(triptolide,T4)药理作用包括抗炎、免疫抑制、保护肾组织上皮细胞等,而且在拮抗器官移植排斥反应、抑制肿瘤生长、拮抗生殖方面也具备良好的作用。

## Progress in *Tripterygium wilfordii* and its bioactive components in the field of pharmacodynamics and pharmacology

**Abstract:**In the trials of multi-glycoside of *Tripterygium wilfordii* (GTW) in the field of pharmacodynamics,some clinical characteristics and symptoms,such as proteinuria,hematuria,joint pain, and skin damage, could be improved in the patients with various diseases including proliferative glomerulonephritis,lupus nephritis,rheumatoid arthritis,psoriasis and other immune-related diseases.In this review,it has been also reported to discuss the effects of GTW and Triptolide (T4),which is a bioactive component in GTW on anti-inflammatory,immunosuppression, and protection of epithelial cell in kidney.On the other hand,it is possible to have some beneficial effects on organ transplant,rejection,tumor growth and anti-fertility.
