摘要 针对专利分析对法律状态需求量庞大而法律状态需单项获取的矛盾,设计并实现基于网络的法律状态信息采集系统。系统通过分布式架构启动多台机器进行搜索,通过一致性Hash算法并引入虚拟客户节点,克服进程分配中的不均衡问题,配合以网页识别,实现包括法律状态在内的专利信息批量、经济、快速获取,有效解决专利现状分析中的数据获取瓶颈问题。实例表明,融入法律状态的专利分析,能使分析结果更为全面、客观和丰富,并更具针对性。

关键词: 分布式架构 一致性哈希 专利法律状态 存活寿命 信息采集

Abstract: Aiming at the contradictions that patent analysis has enormous demands for legal status, while legal status is acquired singly, the paper designs and realizes a legal status information collection system. The system adopts the distributed framework, which conducts searches by multiple machines, and overcomes the unbalanced process distribution by consistent hashing algorithms as well as visual client nodes. Besides, using identification of Web pages technology, it is able to acquire patent information that includes legal status in a batch, economic, quickly process. It also presents a solution to the information acquiring bottleneck problem in today's patent status analysis. The application example shows that combining patent analysis with legal status makes the analysis results more comprehensive, objective, multiple and specific.

Keywords: [Distributed architecture](#), [Consistent hashing](#), [Patent legal status](#), [Survival life span](#), [Information collection](#)
