

# CHICOM: A code of tests for comparing unweighted and weighted histograms and two weighted histograms

Nikolai Gagunashvili

(Submitted on 6 May 2011 (v1), last revised 10 Oct 2011 (this version, v3))

A self-contained Fortran-77 program for calculating test statistics to compare weighted histogram with unweighted histogram and two histograms with weighted entries is presented. The code calculates test statistics for cases of histograms with normalized weights of events and unnormalized weights of events.
