

## Degree distribution nearby the origin of a preferential attachment graph

Tamás F. Móri, *Department of Probability Theory and Statistics, Eötvös Loránd University*

### Abstract

In a 2-parameter scale free model of random graphs it is shown that the asymptotic degree distribution is the same in the neighbourhood of every vertex. This degree distribution is still a power law with characteristic exponent 2, but this exponent is different from the one observed in the whole graph.
