

# Manifold embedding for curve registration

Chloé Dimeglio (IMT), Jean-Michel Loubes (IMT), Elie Maza (GBF)

(Submitted on 27 May 2011)

We focus on the problem of finding a good representative of a sample of random curves warped from a common pattern  $f$ . We first prove that such a problem can be moved onto a manifold framework. Then, we propose an estimation of the common pattern  $f$  based on an approximated geodesic distance on a suitable manifold. We then compare the proposed method to more classical methods.
