

## A dynamical characterization of Poisson-Dirichlet distributions

Louis-Pierre Arguin, *Princeton University*

### Abstract

We show that a slight modification of a theorem of Ruzmaikina and Aizenman on competing particle systems on the real line leads to a characterization of Poisson-Dirichlet distributions  $PD(\alpha, 0)$ . Precisely, let  $\xi$  be a proper random mass-partition i.e. a random sequence  $(\xi_i, i \in \mathbb{N})$  such that  $\xi_1 \geq \xi_2 \geq \dots \geq 0$  and  $\sum_i \xi_i = 1$  a.s.

Consider  $\{W_i\}_{i \in \mathbb{N}}$ , an iid sequence of random positive numbers whose distribution is absolutely continuous with respect to the Lebesgue measure and  $E[W^\lambda] < \infty$  for all  $\lambda \in \mathbb{R}$ . It is shown that, if the law of  $\xi$  is invariant under the random reshuffling

$$(\xi_i, i \in \mathbb{N}) \rightarrow (\{\xi_i W_i\} / \{\sum_j \xi_j W_j\}, i \in \mathbb{N})$$

where the weights are reordered after evolution, then it must be a mixture of Poisson-Dirichlet distributions  $PD(\alpha, 0)$ ,  $\alpha \in (0, 1)$ .
