

Water Utility Management International

Water Utility Management International focuses in particular on the needs and interests of senior water and wastewater utility managers, as well as regulators, consultants, government departments, academics, financiers, operators, and others following, advising on, and implementing solutions in the area of water utility management.

WUMI provides an international reference point on the strategic management issues affecting water utilities and on the leading approaches from around the world aimed at responding to these issues. There is a central theme of achieving efficiency in water utilities, encompassing topics such as benchmarking, billing, tariffs, IT and service standards. In addition, regular themes for articles include financing, regulation, investment, private sector participation, personnel matters, sector reforms, and customer services.

WUMI is published four times a year and presented in a newsletter format, including news / analysis articles, interviews, feature articles, and contributed papers aimed at a management-level readership. Potential authors should contact the Editor, Keith Hayward, at khayward@iwap.co.uk

Editorial Advisory Panel

Water Utility Management International's Editorial Advisory Panel supports the editor in the ongoing development of the publication. The panel has been constituted to provide strategic input on the editorial direction of WUMI, as well as to help identify and encourage potential editorial items. The panel members are:
