Desalination

The International Journal on the Science and Technology of Desalting and Water Purification

Desalination is the premier international journal dedicated to communicating the latest developments in **desalination** including theoretical and applied research, technological and industrial development, other osmotic processes and the experience of operators and users.

Desalination welcomes [submissions](#) describing use of **desalting technologies** such as thermal, membrane, sorption and hybrid processes. In addition, the journal considers exceptional research on new desalination materials, processes and technologies; transport and process modeling; energy consumption, renewable energy and energy recovery; pre-treatment, post-treatment and integrated systems; causes, consequences, and countermeasures of fouling and scaling; and technical, economic, and regulatory analyses of full-scale plants.

Desalination welcomes theoretical and experimental research as Full Text Papers,

[Guide for
Authors](#)[Submit Your

Short Communications, State-of-the-Art Reviews and Letters to Editors on all aspects of desalination described above. Prospective Review authors are requested to contact one of the [Editors](#) prior to submission. Short Communications should be concise and not exceed 4-6 printed pages but must include complete descriptions of any investigation of the research which must be cutting-edge and novel with knowledge that warrants speedy communication to the readership.
