### ABSTRACT

The enhancement of charge state ion beam intensities in ECR2 ion source with metal tube is introduced in the paper. The effect of aluminum tube is the most remarkable, it results in  $\text{Ar}^{8+}$  ions beam intensity rising from  $245 \mu\text{A}$  to  $330 \mu\text{A}$ ,  $\text{Ar}^{9+}$  ions from  $125 \mu\text{A}$  to  $150 \mu\text{A}$  in comparison to Zr tube.

**Key words** ECR ion source Metal tube High charge state ions Secondary electron

### 用计算机分析辐射屏蔽效果

日本科学技术厅的乏燃料运输容器调查研讨委员会1998年10月22日决定与日本核燃料公司运输部门共同用计算机分析评价运输容器的辐射屏蔽效果。为了判明订正运输容器材料数据的技术问题,以改变中子屏蔽材料的密度和硼与氢的浓度来确认容器的性能。其研究对象是4种沸水堆的乏燃料运输容器和2种压水堆的乏燃料运输容器,用计算机分析容器的表面剂量状况和离容器1 m处的剂量率。
