7.4 Electromagnetic Spectrum

- Maxwell's equations impose no limit on the frequency of electromagnetic waves.
- It extends continuously from the long radio waves to the very high energy gamma rays observed in cosmic radiation.

$$f: 10-10^{24} \text{ Hz}; \lambda: 10^7-10^{-16} \text{ m}$$

- The frequencies of long radio waves are about 10 hertz, and the wavelengths are about 3×10^7 m
- The frequencies of gamma rays are of the order of 10^{24} hertz, and the wavelengths of the order of 3×10^{-16} meter.

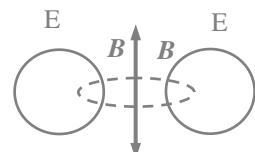

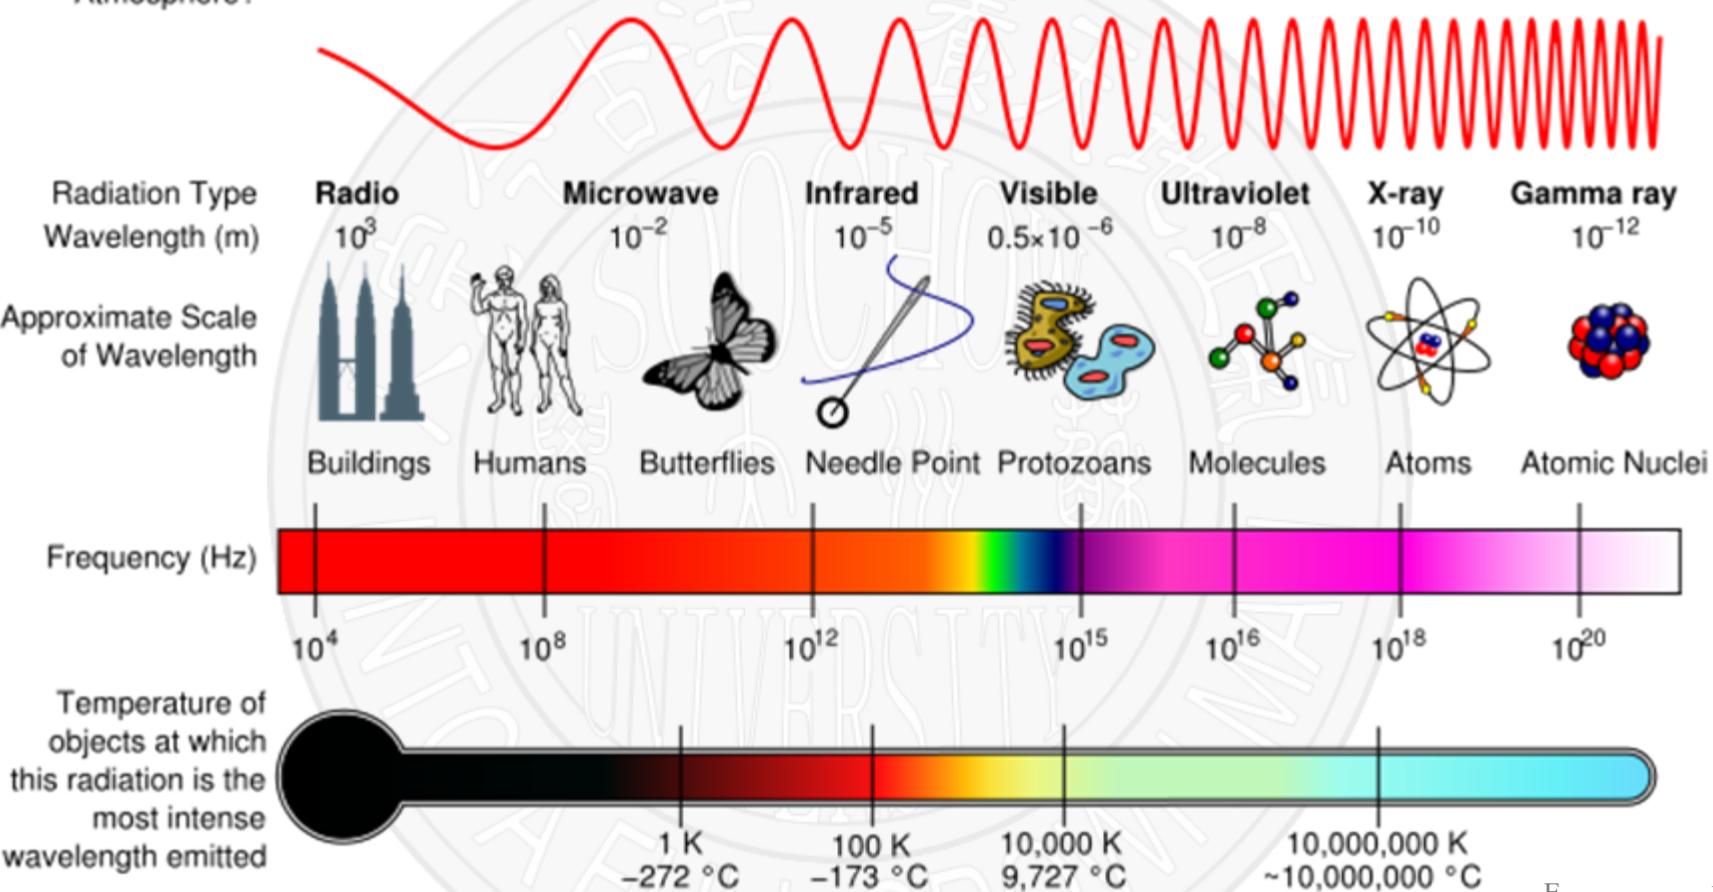

7.4 Electromagnetic Spectrum

The spectrum of electromagnetic waves. The abbreviations elf, vf, vlf, . . . mean, respectively, extremely low frequency, voice frequency, very low frequency, low frequency, medium frequency, high frequency, very high frequency, ultrahigh frequency, super high frequency, and extremely high frequency. The limits indicated by the shaded regions are approximate. The energy hf , where h is Planck's constant (6.63×10^{-34} joule-second) and f is the frequency, is the of a photon or quantum of radiation.
