**摘要:** 目的: 探讨Twist对卵巢癌细胞株A2780顺铂敏感性及细胞增殖凋亡的影响。方法: 通过Western blot筛选细胞株, 构建小干扰RNA, qPCR筛选Twist-siRNA, 将构建成功的Twist-siRNA逆转录于上皮性卵巢癌细胞株A2780中, 通过CCK-8细胞术及流式细胞术, 研究下调Twist对卵巢癌细胞株的增殖、凋亡及对化疗药物顺铂的影响。结果: 选择人卵巢癌细胞株A2780, 引入小干扰RNA后, Twist表达降低; 细胞的增殖能力下降, 凋亡增加 ( $P < 0.05$ ), 差异有统计学意义。si-Twist组相比对照组Twist基因的表达量明显降低, 且呈现一定的顺铂浓度依赖性差异( $P < 0.05$ )。结论: 下调Twist可抑制卵巢癌细胞A2780的增殖, 促进其凋亡; 下调Twist卵巢癌细胞A2780对顺铂的敏感性增加。

**Abstract:** Objective: To investigate the effect of Twist on cisplatin sensitivity and cell proliferation and apoptosis of ovarian cancer cell line A2780. Methods: Western blot was used to screen cell lines and construct small interfering RNA. qPCR was used to screen Twist-siRNA. The constructed Twist-siRNA was retro-transcribed into epithelial ovarian cancer cell line A2780. Results: Human ovarian cancer cell line A2780 was selected, and Twist expression was decreased after small interfering RNA was introduced. The proliferation ability of cells decreased and apoptosis increased ( $P < 0.05$ ), and the difference was statistically significant. Conclusion: Down-regulation of Twist could inhibit the proliferation and promote the apoptosis of ovarian cancer cells A2780. The sensitivity of Twist ovarian cancer cells A2780 to cisplatin increased.
