Abstract:

Objective: To analyze the use of ribavirin in a hospital pediatrics, strengthening rational administration, the safty of medication and providing reference for safe drug use. Methods: The pediatric emergency department prescription was extracted. Retrospective study of ribavirin used in pediatrics of a hospital in 2017, including dose, age and the diagnosis. The rationality of ribavirin was investigated in antiviral therapy. Results: The use of pediatric ribavirin accounted for 89.37% of the hospital, and the proportion of children aged 0-6 was 84.19%. The application of ribavirin in the diagnosis of acute pharyngitis, acute bronchitis, acute upper respiratory tract infection, herpes angina was 81.25%. Conclusion: The application of ribavirin is inappropriate at present. The pharmaceutical department should strengthen the control of ribavirin in hospitals. Pediatricians should strictly control the use of antiviral drugs and be according to the instructions strictly and carefully.
